

ServiceTitan Assessment Cheatsheet

Role: Customer Support Advocate / Tech Support Specialist | Module: Back Office & Integrations

1. ACCOUNTING & BOOKKEEPING FUNDAMENTALS

Account Type	Increased (+)	Decreased (-)	Key Examples & ServiceTitan Context
Assets	DEBIT	CREDIT	Cash, Accounts Receivable (A/R), Inventory
Expenses	DEBIT	CREDIT	Payroll, Technician Mileage, Software, Supplies
Liabilities	CREDIT	DEBIT	Accounts Payable (A/P), Deferred Revenue
Equity	CREDIT	DEBIT	Owner's Capital, Retained Earnings
Revenue / Income	CREDIT	DEBIT	Completed Job Invoices, Membership Billing

Deferred Revenue vs. Recognized Revenue

- Deferred (Unearned) Revenue (Liability): Cash received upfront before service is rendered (e.g., annual \$1,200 HVAC plan).
- Recognized Revenue (Income): Revenue recorded ONLY when the technician physically completes the job visit.
- Journal Entries:
 1. At Sale: DEBIT Cash (\$1,200) | CREDIT Deferred Revenue (\$1,200)
 2. At Visit Completion: DEBIT Deferred Revenue (\$100) | CREDIT Service Income (\$100)

2. PAYROLL, TIMESHEETS & BILLING LOGIC

- Overtime Calculation: Regular Wage x 1.5 for hours exceeding 40 hours/week (or 8 hrs/day in specific state laws).
- Billable vs. Non-Billable Time: On-site job work & driving time = Billable to customer. Shop meetings & truck restocking = Non-billable overhead.
- Prorated Subscriptions: (Monthly Fee / Days in Month) x Active Days remaining in cycle.
- Prevailing Wage / Contract Billing: Specialized pay scales attached to government/commercial building contracts.

3. SOFTWARE INTEGRATIONS & DATA FLOW (QuickBooks / NetSuite / Sage)

Entity	ServiceTitan Event	Target System Sync	Common Sync Failure & Resolution
Customer	Create/Update Record	Upsert Customer/Job	Duplicate Name Error -> Merge or match ID
Invoice	Post/Sign Invoice	Create Sales Invoice	Unmapped GL Account -> Assign income code
Payment	Collect Card/Check	Apply Payment to Invoice	Closed Invoice -> Verify payment status
Inventory/PO	Receive Purchase Order	Create Item Receipt/Bill	Tax Code Mismatch -> Align tax agency rules

4. EXCEL, SPREADSHEETS & DATA ANALYSIS

- VLOOKUP Syntax: =VLOOKUP(lookup_value, table_array, col_index_num, FALSE)
Use case: Matching ServiceTitan Invoice IDs against exported QuickBooks bank deposit files.
- XLOOKUP Syntax: =XLOOKUP(lookup_value, lookup_vector, return_vector)
Use case: Modern replacement for VLOOKUP without left-to-right column limitations.
- SUMIFS Syntax: =SUMIFS(sum_range, criteria_range1, criteria1, ...)
Use case: Summing total completed invoice revenue for a specific technician in July.
- Pivot Tables: Fast aggregation of sync error logs grouped by Error Code or GL Account.

5. TECHNICAL TROUBLESHOOTING & DE-ESCALATION METHODOLOGY

1. Triage: Isolate whether error is at Data Entry (ServiceTitan) -> Sync Pipeline (API/Batch) -> Target ERP (QuickBooks).
2. Diagnostic Steps: Inspect API error payload -> Verify GL Account Mapping -> Check user permissions & tax settings.
3. Customer Communication: Reassure client data integrity is safe -> Provide clear resolution timeline -> Share walkthrough.
